

FINALLY!

The D.O.T. Passive Shutdown system you've been waiting for has arrived!

It's inexpensive and user-friendly!
It's the **PASSIVE-R4!**

Transport Hose
Inlet Side

PATENT PENDING

Transport Hose
Outlet Side

- **Certified** to meet D.O.T. 49CFR173.315
- Designed to be installed **on your existing hose**
- Simple installation can be done **by your people in your shop**
- Buy it just once - **move to any hose in the future** at little or no additional cost
- Made entirely of **corrosion resistant materials** for super-long life
- Compact and **light-weight** - weighs just 6 pounds and adds less than 8 inches to the hose
- **Fail safe design** can't be operated incorrectly

- Operating Range: -50°F to +250°F
0 PSI to 400 PSI
- Same unit good for both LPG & NH₃ Service
- **Flows 507 GPM LPG** at 70 PSI differential
- Don't be held hostage to one hose supplier
- System does not place any harmful internal loads on the hose
- Unlike other mechanical systems...you can actually "test" this system for proper operation and have confidence that it will work if needed
- Operating principal is totally mechanical which eliminates the serious operating problems associated with "pressure" based systems
