

INTRODUCING

RSD™

The new Remote Safety Bobtail Shut-Down System

**Design, features
and reliability of a
high-end system...**

**at the price
of a low-end system!**

MANUFACTURED BY PGI INTERNATIONAL

RSD-2™

Dual-Function D.O.T. Remote Safety System for Bobtail Trucks

Flexible Modular Design - Minimal Installation Time

▪ Look at all the **standard features!**

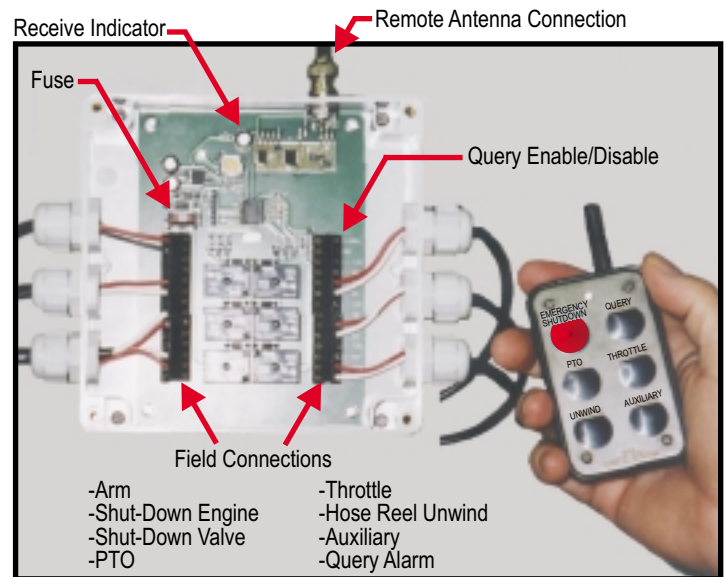

- Powerful FM modulated transmitter easily capable of 300 foot range
- Weatherproof, extremely rugged transmitter
- Active transmitter battery test indication with every transmission
- Transmitter operates on 2 standard AAA alkaline batteries or rechargeable Ni-Cd or Ni-Mh
- Transmitter designed for greater than one year of battery life
- Transmitter weighs only 5.6 oz and readily adapts to pouch or belt carriers
- Individual transmitter security codes assure reliable interference-free operation of only intended receiver(s)
- Features "Latching" emergency shut-down requiring system reset after activation
- User enable/disable "Query" feature available to insure driver possession of transmitter at all times
- Remote bracket-mounted antenna
- Remote under-dash ignition relay
- Optional manual tank valve shutdown actuator (RSD-BV1) that generates over 55 lbs of cable pull force for extremely reliable operation

RSD-6™

Multi-Function D.O.T. Remote Safety System for Bobtail Trucks

▪ Look at all the **standard features!**

- Powerful FM modulated transmitter easily capable of 300 foot range
- Weatherproof, extremely rugged transmitter
- Active transmitter battery test indication with every transmission
- Transmitter operates on 2 standard AAA alkaline batteries or rechargeable Ni-Cd or Ni-Mh
- Transmitter designed for greater than one year of transmission battery life
- Transmitter weighs only 5.6 oz and readily adapts to pouch or belt carriers
- Individual transmitter security codes assure reliable interference-free operation of only intended receiver(s)
- Shutdown, PTO, Throttle, Query, Rewind and Auxiliary functionality is standard
- Features "Latching" emergency shut-down requiring system reset after activation
- User enable/disable "Query" feature available to insure driver possession of transmitter at all times
- Weatherproof receiver unit with remote bracket-mounted antenna
- Remote under-dash ignition relay
- Optional manual tank valve shutdown actuator (RSD-BV1) that generates over 55 lbs of cable pull force for extremely reliable operation

▪ Buy just one unit for all your needs.

- Implement the functions you want now...implement additional functions later.

**High-end design, features, reliability
and flexibility at low-end prices.**

RSD-BV1™

Manual Tank Valve Remote Shut-down Actuator

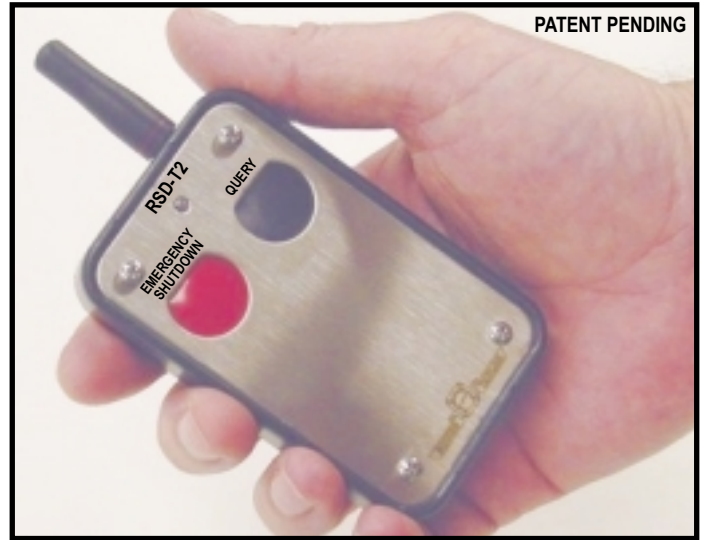

- Mounts in-line with your manual tank valve emergency shut-off system
- Generates over 55 pounds of cable pull force for extremely reliable operation
- Designed and built rugged to last in the harshest of environments
- Unique bracket design allows attachment on top, side or bottom of mounting surface

Take a **HANDS ON™** Approach to Protecting your Vehicle Investment

You paid for a radio remote safety system for your vehicle...so why not guarantee it will work if needed?!

Single function remote shutdown systems unfortunately can be defeated if the driver doesn't carry the transmitter or if the batteries are never checked. Normal transfer operations simply don't require use of the transmitter.

That's why every Squibb Taylor RSD system is equipped with the **Hands On™** query feature. It enables you to turn on the **Hands On™** timer based on any mechanical, electrical or pneumatic event on the vehicle.

Typically it is turned on only during product transfer operations to guarantee that the shutdown transmitter is carried by the driver and that it is in working order.

When enabled during product transfer, the driver is required to signal the system by pressing the Query button on the transmitter every 5 minutes or the safety shutdown system will be activated to close the internal valve and kill the vehicle engine. Thirty seconds prior to exhausting the 5 minute timer, the vehicle backup horn will sound, alerting the driver to signal the system to prevent shutdown and guarantee that a working transmitter is being carried by the driver.

It's Simple

It's Effective

It's Standard on all Squibb-Taylor RSD Systems

It's for Your Protection!
